

## IDU-Associated AIDS Cases by Exposure Category Reported in 1999, United States

| <u>Exposure Category</u>                                   | <u>Number</u> | <u>Percent</u> |
|--|---------------|----------------|
| Heterosexual male IDU                                      | 7,207         | 52             |
| Female IDU   | 2,931         | 21             |
| Men who have sex with men IDU                              | 1,806         | 13             |
| Heterosexual sex partners of IDUs                          | 1,790         | 13             |
| Children whose mothers are IDUs<br>or sex partners of IDUs | 99            | 1              |
| Total  | 13,833        |                |

## **IDU-Associated AIDS Cases by Exposure Category, Reported in 1999, United States**

Thirty-one percent of AIDS cases reported in 1999 were associated with injection drug use. Most of the IDU-associated AIDS cases are among injection drug users; half are heterosexual male IDUs, another 21% are female IDUs, and 13% are men who have sex with men and inject drugs. Thirteen percent of IDU-associated cases are heterosexual partners of an IDU. An additional 1% of cases are in children infected through perinatal HIV transmission by their mother's who are IDU or are sex partners of IDUs.
